

PL-TB-AB-6 Push-Lock Turnbuckle With Concrete Anchor Bolt 316 Stainless Steel For 3/16" Cable

Easy to install (SWAGELESS FITTING)

Push-Lock® Turnbuckles are typically used as a second tensioning device on longer runs. They are a combination of our Adjust-a-Body® tensioners and Push-Lock® Studs. The threaded bolt on the end screws into a commonly available 'Red Head' concrete anchor (not included). Order the anchor separately from your local building supply outlet. For use on level runs.
