

CAPL-TB-HB-6 Push-Lock Turnbuckle With Hanger Bolt 316 Stainless Steel For 3/16" Cable

The Push-Lock® tensioner for inside-of-post applications.

Push-Lock® Turnbuckles are typically used as a second tensioning device on longer runs. They are a combination of our Adjust-a-Body® tensioners and Push-Lock® Studs, and are available with whatever connecting end is necessary. Whether wood posts, metal posts, sleeved posts, or even concrete; level runs or stairs, the Push-Lock® Turnbuckle is our most universal fitting.
