

VGJ-PT10C Pre-Tensioner Pliers for 5/16" Cable

Special Pre-Tensioner Locking Pliers are used with the Pre-Tensioner, PT 250. Each cable diameter requires individual pliers which must be ordered separately to support proper cable support while tensioning. The locking pliers with machined jaws grip the cable as you are tensioning in the field or on a job site. This keeps the cable from turning and prevents damage to the cable when cable is being tensioned.
