

22-531-7 Standard Railing Flange Galvanized Steel 1-1/4" IPS (1.72" ID)

Ideal when a structural fixing is required. When fixing guard railing and balustrades, Type 62 should always be used. The holes are of sufficient diameter to insure proper fixing with either a mechanical or chemical anchor. The two set screws in the vertical socket give greater side-load stability to the upright. It is recommended that the fixing holes in the flange should be in line with the applied load. Ø indicates diameter of fixing holes.
