

CR014 1/4" Stainless Steel 316 Grade Cable (Sold by the foot)

1 x 19

We recommend only 1x19 construction, type 316 stainless steel cable for cable railing applications. 1x19 strand cable is engineered to hold static loads without stretching, and it is relatively stiff. Other cable constructions are not recommended because of their elevated levels of stretch and lower breaking strengths in comparison to 1x19 construction.

Cable Diam: 1/4"

Construction: 1x19

Type: SS-316

Minimum Breaking Strength: 6900 lbs
